

EVERCOPY

Strong points

The recycled papers produced at Everbal, the Clairefontaine group recycling mill. Everbal aims at integral re-use of salvaged papers, and produces white 100 % recycled papers. Everbal produces recycled products using a clever production process without de-inking, and with no chlorine treatment.

Other production processes de-ink which causes considerable loss of fibres and mineral filler (20 to 30 %), thus producing much waste to be disposed of. Everbal aims at integral re-use of salvages papers: 106 kilos of salvaged paper produce 100 kilos of recycled paper. Thus Everbal contributes to the protection of the environment by generating little waste, which is moreover as agricultural fertilizer.

Technical specifications

Parameter	Standard	Unit
Product		Evercopy Prestige
Format	Art.-Nr. 031860	A4 (210 x 297 mm)
	Art.-Nr. 031862	A3 (297 x 420 mm)
	Art.-Nr. 031863	A4 (210 x 297 mm), gelocht
Substance g/m ²	ISO 536	90
Thickness µm	ISO 534	113
Bulk	ISO 534	1.25
Whiteness CIE	ISO 11475	160
Opacity %	ISO 2471	93
Bendtsen roughness (W/F) ml/min	DIN 53108	150
Certifications	ISO 14001 ISO 9001 DIN 6738	Environmental management Quality management Age resistance
